

Khaza Shaik

Senior Software Engineer, Lead (Java · React/Angular · AI)

Hyderabad, India · Khazashaik4@gmail.com · +91 82913 33422 · linkedin.com/in/khaza-shaik · github.com/khazaShaik

Summary

Senior Full Stack Engineer with 10+ years building and scaling enterprise systems for telecom, supply chain, railroad, and financial clients. Currently lead a team of 4 and mentor 4–5 junior developers on an AI-powered test orchestration platform at T-Mobile, owning its architecture end to end. Deep across the stack — Java and Spring Boot, Angular and React, Kafka event-driven systems, and Cassandra/MongoDB on AWS, Azure, and Kubernetes — plus production AI: RAG pipelines, tool-calling agents, and LLM features in Python. Track record of taking systems from weekly P1 pages to almost none.

Experience

Senior Software Engineer (Lead) · Concentrix

Jun 2025 – Present · Hyderabad

Client: T-Mobile — Supply Chain Management (SCM)

- Lead TOP-Elevate, a test orchestration platform that lets any tester run full end-to-end supply-chain journeys from one screen, without needing SAP, API, or database knowledge
- Designed the architecture: an LLM generates schema-valid test data and picks reusable step templates, while deterministic code runs the SAP, API, and database steps (Cassandra, MongoDB) and validates each result — keeping the LLM boundary narrow so failures stay debuggable
- Hands-on across the stack — built the critical paths myself: the test-data generation engine, step-execution runtime, and per-run validation reporting, in Python (FastAPI, LangChain) with a React front-end
- Lead a team of 4 (2 devs, 1 QA, 1 dev-test) and mentor 4–5 junior developers — own the key design decisions, run design and code reviews each sprint, and shape the roadmap with product owners
- Cut end-to-end test setup from a multi-team, multi-day effort to minutes — OEM data loads from a 24–48 hour ticket to 5 minutes — saving a measured 8,000+ engineering hours across 4,400+ test cases, 8 environments and 8 distribution centres, with monthly usage up ~40x as teams adopted it
- Widened what gets tested — teams previously covered only the happy path; integration, negative, and security scenarios are now routine, catching failures that used to reach production

Cloud Consultant · Concentrix

Feb 2023 – Jun 2025 · Hyderabad

Client: T-Mobile — Supply Chain Management (SCM)

- Owned three SCM modules (DRI / DRO / DLM) serving ~3,000 T-Mobile retail stores, on a device-lifecycle platform carrying 18M+ daily transactions across 50+ boundary systems — took them from weekly P1 pages to almost none by fixing root causes rather than patching symptoms
- Delivered features across TIMO Console (Angular back-office) and the TIMO 2.0 iOS app on a ~55-microservice retail inventory platform, replacing manual reconciliation with system-tracked movement and SOX-compliant inventory reporting
- Built Spring Boot microservices with REST APIs and Angular/TypeScript front-ends, and worked across the Kafka event pipeline that keeps store-level Stock on Hand in sync for BOPIS, buy-online-while-in-store, and same-day delivery
- Tuned Cassandra queries and reshaped the data models behind the hot paths, and replaced synchronous batch processing with Kafka-based asynchronous flows to remove the throughput ceiling on large data loads
- Set up CI/CD with GitLab pipelines and Azure DevOps using Docker and Kubernetes, moving releases from manual steps to a continuous dev → UAT → pre-prod → production flow that ships every sprint on a per-feature basis

Software Engineer 1 · ProKarma

Jul 2019 – Jan 2023 · Hyderabad

Client: T-Mobile US, Inc. & Union Pacific Railroad

- Delivered back-end and Angular UI features on DASH, T-Mobile's postpaid order platform for retail and care reps — activations, add-a-line, and device sales across six finance types (FRP, EIP, JOD, CCR, BOPIS, BOWIS)
- Owned production defect resolution on DASH — including Redis cache-consistency bugs where stale catalog loads surfaced as wrong pricing at the point of sale, traced across ~15 interfacing systems (SAP, MPM, DPS, Samson, xECM)
- Set up blue-green deployments so releases shipped without a maintenance window, and migrated service credentials to HashiCorp Vault — removing hard-coded secrets and making rotation a config change, not a redeploy
- Delivered Crew Allocation and Time Management for Union Pacific Railroad — a Rest Day engine running daily for a ~4,000-member crew workforce, with configurable rules enforcing the mandated 12–24 hour rest gap between shifts by role and policy

STACK Java · Spring Boot · Oracle · Redis · REST APIs · Angular · Vault · Splunk · GitLab CI/CD

Client: CCIL — Clearing Corporation of India Ltd.

- Delivered ERCS for collateral notices at CCIL, India's central counterparty for clearing and settlement — live in production at enotice.ccilindia.com and used across its member network of major Indian banks and financial institutions
- Built CRM (Credit Risk Monitoring) from scratch to ingest member-bank data, calculate risk scores, and auto-categorize participants, replacing a slow multi-day manual process with a quick automated workflow
- Modernised a legacy monolith from Java 6 to Java 8, moving business logic behind REST services — improved performance and left the codebase far easier to maintain
- Owned four applications full stack — APIs, UI, SQL schema design, and testing — with a strong track record for production stability

STACK Java 6 → 8 · Spring · REST · Oracle · SQL · Tomcat · AngularJS · JSP · JPA · Git

Selected Projects

Git Release Analyzer

AI tool that compares release branches using Git APIs, producing rich summaries of code changes, commits, MRs, developers, and reviewers.

Python · Git API · OpenAI · FastAPI · React

Agent Studio — Onboard Any Service, Generate Its Tests

A generic tool that takes a service from "here is my repo" to a running test suite.

React 19 · TypeScript · Python · FastAPI · LangGraph · RAG · pgvector · SSE

DocuMind — RAG-Powered Doc Assistant

Retrieval-augmented Q&A system over technical documentation. Ingests PDFs and Markdown, chunks with recursive splitting, embeds via OpenAI, and retrieves via ChromaDB with hybrid search and cross-encoder reranking.

Python · LangChain · OpenAI · ChromaDB · FastAPI · RAG

AgentFlow — Multi-Agent Workflow

Multi-agent orchestration system built with LangGraph. Four agents (planner, retriever, executor, critic) collaborate through shared state with tool calling, function routing, and self-correction loops.

Python · LangGraph · LangChain · OpenAI · Function Calling · AI Agents

Technical Skills

AI Engineering	Python · Generative AI · LLMs · Retrieval-Augmented Generation (RAG) · LangChain · LangGraph · OpenAI / Anthropic Claude · FastAPI · Vector DBs (FAISS, Pinecone) · AI Agents · Prompt Engineering
Backend	Java · Spring Boot · Spring Security · Microservices · REST APIs / API Design · System Design · Distributed Systems · Event-Driven Architecture · Scalability & High Availability · Performance Optimization · Legacy Modernization
Frontend	Angular · React · TypeScript · JavaScript · RxJS / Redux · HTML5 / CSS3 · Responsive Design · Next.js
Cloud & DevOps	AWS · Azure · Docker · Kubernetes · GitLab CI/CD · HashiCorp Vault · Blue-Green Deployments
Data & Messaging	SQL · Oracle / PL-SQL · PostgreSQL · MongoDB · Cassandra · Redis / Caching · Kafka · RabbitMQ · Splunk · Observability & Monitoring · Data Modeling
Leadership & Practices	Technical Leadership · Architecture & Code Reviews · Mentoring · Stakeholder Management · Agile / Scrum · Test Automation

Education

B.Tech, Electronics & Communication

Jawaharlal Nehru Technological University, India

Certifications

Machine Learning Specialization — Stanford University &

DeepLearning.AI, May 2026

Supervised Machine Learning: Regression and Classification · Advanced Learning Algorithms · Unsupervised Learning, Recommenders, Reinforcement Learning
